# Dušan Milojković

## Student

I am **student of final year at the Faculty of Electronics in Niš**, on the Computing and Informatics module. As my virtues, I would emphasize persistence, ambition and discipline. I am always willing to learn as much as possible and spread my range of knowledge. I like to work in a team because I believe that there is something to learn from each colleague, and I am also willing to help others in the team when I can.

## EDUCATION

### Gimnazija "Vuk Karadžić" Babušnica
Gimnazija

*09/2013 - 06/2017*                                    *Babušnica, Srbija*

### Elektronski fakultet Niš
Univerzitet u Nišu

*09/2017 - Present*                                         *Niš, Srbija*

## WORK EXPERIENCE

### Internship
Schneider Electric

*09/2023 - 11/2023*
*Full - Stack developer*

- I worked on the design and planning of an application that supported real-time messaging between users. The application was implemented with the help of .NET Core with the support of the SignalR library, while Angular was used for the client side.

### Team project at Faculty
Faculty of Electronic Engineering Niš

*03/2023 - 05/2023*
*Full - Stack developer*

- The project was based on a Web application implemented with .NET Core, using a microservice architecture. The back-end was implemented in the .NET Core Web API framework, while the client part used the MVC framework. Basic CRUD operations, user authorization and authentication are implemented within the application.

### Sport Store Web Application
Faculty of Electronic Engineering Niš

*01/2022 - 03/2022*
*Full Stack developer*

- I worked on the design and planning of the web application of the sports store. The application supported CRUD operations, the ability to register and log in users, and there was also a privileged user (admin). The client side was based on React, while ASP .NET Core was used for the back-end.

## SKILLS

Object - oriented programming   C/C++   C#

ASP .NET Core   JavaScript   HTML & CSS

React/ReactNative   Photoshop & Lightroom

MS SQL

## PERSONAL PROJECTS

Application for evidenting court cases
(03/2022 - 04/2022)
- Developing a web application based on React on the front-end and ASP .NET Core on the back-end. The application supported basic CRUD operations

FoodDelivery App (06/2023 - 07/2023)
- The development of an e-commerce web application whose client side was realized with React library, while ASP .NET Core 7 was used for the server part. The application supported user authentication and authorization and contained CRUD operations.

ChatApp (11/2023 - 12/2023)
- I was working on the development of a mobile application similar to whatsapp. The application supported real-time messaging, sending pictures, group chat, as well as updating user information. React Native was used for implementation, while Firebase was used for data storage.
